

BLEACH BOTTLE FEEDER

1. You'll need an empty bleach bottle with a center spout. Wash bottle thoroughly.
2. Cut four large holes in sides of the bottle, about 2" from the bottom. Drill a small hole in the center of the bottle cap. Thread a thin wire through the hole, coiling the end to form a knot. Bend the other end into a wide hook.
3. If decorating, a base coat of a good quality spray enamel is required.
4. Fill the feeder with seed & hang on clothesline or branch, as far from tree trunk as possible.
